

Happy Friday Teachers!

We received a lot of great feedback from last week'. A couple of updates this week:

- Zoom rolled out an update for the application on your computer that should allow you to share your iPad screen via Zoom again. Let me know if you need help installing the update.
- Many teachers want to be able to project their iPad screen on their projector in class. We have had a multitude of requests for different screen mirroring software added to computers to make this happen. With so many new devices in grades 5-12 and so many different software requests, we have

decided to test out the ones with the best reviews and price. We have teachers piloting these products currently. Once the trials are over and we get feedback from teachers, the tech department will share which screen mirroring software we will be able to support. Thanks for your patience through this process.

If you have any questions about your iPad, or would like me to stop by your classroom for a one-on-one session, please let me know.

### [Microsoft OneNote](#)

OneNote is a digital notebook that can keep you and your students' notes organized across multiple devices. Think of it as your digital Lisa Frank Trapper Keeper from the 80's! The best part of the app is the ability to "ink" your notes in the notebook. This is great for math and science teachers. You can take pictures with your iPad and insert them directly into your notebook. It allows you to add graph paper, as well as quiz questions right into your notebook for exit slips or checks for understanding when you use this with Class Notebook. Adding PDF or other documents right into the notebook is a breeze allowing you to write directly on top of your document. Projecting your notes on the projector or online via video conferencing is easy as well. You can then share your notes with your students.

### [Microsoft Translator](#)

Translator is a great app that can translate text into over 70 languages using the iPad camera. It will translate your speech into any of those languages as well. This app can assist with communicating with students and their families where English is not the primary language. We have had teachers at ZCS who have found this app very beneficial in and out of the classroom with ELL students.
