

Welcome back!

I hope you were able to disconnect over Fall Break and come back ready to go for Q2. Below are some more apps that you may want to try out on your new device. Just shoot me an e-mail if you would like to download it to your iPad. Below is an update regarding screen mirroring:

- We have piloted different screen mirroring tools that will allow you to share your iPad screen to your projector (while not on Zoom). Mirroring360 has performed well with those who have tried it. It currently costs \$11.99. You can get a 1-week trial if you would like to download it and try it. Let me know if you would like assistance. Information can be found at <https://www.mirroring360.com/>. If you would like to

continue to use Mirroing360 after the week free trial, create a help ticket and the technology department will purchase it for you. You will receive an activation code to use on your device.

If you have any questions about your iPad, or would like me to stop by your classroom for a one-on-one session, [CLICK HERE](#) to sign up for a time to meet.

## Classroom Screen

This web browser (not a download) app has everything you need on just one screen. Show students the time by adding it to the screen or add a timer to limit your students' working time. You can even add a traffic light and choose if the light is green, orange or red. That way, students know if they are too loud or if they have to keep quiet or not. Use the textpad to write text on your screen or the drawing pad to make a sketch. You can turn your whole screen in a drawing pad, or just a little corner. Add a QR code to the screen. It's also very handy to have a calculator on your screen to do some quick calculations or to pick out a student randomly with the random name picker.

## Quizlet

Quizlet allows you to study, practice and master what you are learning. Create flashcards or choose from millions created by other students. With the Quizlet flashcards app, you can:

- Help your students learn and study
- Make flashcards for any topic
- Put your memory to the test with Write
- Race against the clock in a game of Match
- Share flashcards
- Listen to your material pronounced correctly in 18 languages

## Stage by Belkin

Stage lets you create, collaborate, and demonstrate. Combine your camera with an interactive whiteboard so you can freehand sketch over live video or images, create Madden-style demo videos and get creative by inserting pictures, shapes, text and labels. Record videos or screen capture images and save them directly to your device's photo library. To be more specific: use Stage to scan student work, books or worksheets. Then start annotating them in front of class while you are projecting your iPad screen.
